1. Out of 100, what percentage of the project do you think you contributed to?

Assuming that, if the effort of the project was equally distributed should have been 25% per each, I think that my contribution is 35%.

2. Describe your individual contribution of the project (max 1/2) page.

Although the idea was not mine I've been directly involved in all the processes to organize and develop it, being key in the decision of which things to include (comparison of Metaverses, scene and transaction). After cooperate in the research of information and decide how the scene should be (the objects in it and the entity in charge of doing the transaction) I've cooperated in all the process that starts in the creation of the code, launching it in local to do the checks, deploy and publish. The wallets to publish are from one of the teammates (Alex), but both of us have had lots of troubles due to dependencies of the code and publishing issues, which we solved hand by hand. After that I've contributed in the report and the videos doing the part of coding and checking that everything was properly done.
